ABSTRACT

This invention relates to a cassette (1) for supporting substrates and includes a pair of frames (2) opposite each other, at least two supporting bodies (3) arranged opposite each other between the frames, and at least a stopper rod (4) arranged between the frames. The frames, the supporting bodies and the stopper rods define a space for accommodating the substrates, and each stopper rod includes a metal rod (40) and a resin layer (42). The resin layer forms a coating on the metal rod, forming a unit.
